

KOFAB™

CURVEYOR®

KOFAB CURVEYOR'S SIGNATURE DESIGN

Powered belt turns created and custom built for the food processing and material handling industries

Bi-directional product flow and center driven belt for right-hand or left-hand functionality

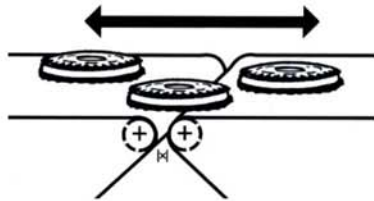

DESIGN FEATURES

BI-DIRECTIONAL PRODUCT FLOW

KOFAB Curveyor incorporates the ability to function as a right-hand or left-hand unit.

SANITARY DESIGN

All stainless steel construction includes continuous welds, USDA/FDA-approved belts, nose bar assemblies and a conveyor belt that can be changed in minutes.

Pull-out / removable nosebar assemblies for ease of maintenance and sanitation.

TIGHT TRANSFERS

Small diameter in-feed and discharge rollers allow for the smallest product to transfer without concern for large transfer gaps or product damage.

LOW MAINTENANCE

Quick disassembly without the use of tools for cleanup and sanitation

Quick release mechanism breaks the machine down within minutes for maintenance and daily sanitation.

VERSATILITY

The Curveyor maintains product orientation and matches all required belt speeds with a 30° to 180° turning range and tight minimum inside belt turn radius.
